## Press Release

### Purist elegance

As pillar mixers with convenient mixing function, the new F7 electronic taps feature an adjustable and turn-proof temperature stop.

**The KWC Professional family of taps is set to welcome a perfectly styled new addition. From 2024, the F7 line of electronic pillar taps will join the product range for public and commercial washrooms. In combination with the new C module and the associated KWC Smart Connect app, the new electronic taps can be easily parameterised.**

The slimline F7 tap body in high-quality stainless steel impresses with its prestigious, architectural design. The seamless housing with brushed surface is particularly hygienic and easy to clean. Touch-free use thanks to the optical sensor integrated flush in the tap housing presents another plus for hygiene. In addition, the integrated electronic controller enables automatic hygiene flushing 24 hours after the last use for guaranteed drinking water hygiene.

A further benefit of the new F7 line: Thanks to the two sizes with a height of 295 mm and 165 mm respectively, F7 taps can be installed either on conventional washbasins with a tap hole or in combination with countertop washbasins. Both size variants are available in pillar form with convenient mixing function and as pillar taps without mixer. The mixer taps feature an adjustable and turn-proof temperature stop. All tap versions are suitable for external battery and mains operation and can be integrated into the AQUA 3000 open water management system using optional electronic modules.

Professional

The connectivity module (C module) from the range of accessories enables the tap to be controlled and parameterised regardless of whether power is supplied by battery or power supply unit. The C module ensures a direct connection between the tap and the app. The module can be connected directly to the tap cable under the washbasin using a clip integrated in the module housing.

Using the new KWC Smart Connect app, it is possible to wirelessly connect up to 100 taps with password-protected security. This means that, even at sanitary room level, grouped tap functions are possible without additional investment in higher-level control hardware. Individual settings, such as water flow time or sensor range, can be parameterised. General information, e.g. on the battery status, is displayed and relevant statistical data can be read out and saved.

#### **KWC Professional**

**KWC Professional is a specialised system and solution provider for sanitary facility equipment and intelligent water management systems for the commercial, public and semi-public sectors. KWC Professional products fulfil the highest standards of safety, hygiene and durability. Customised product solutions are also part of the range.
