## Press Release

### Intelligent comfort & hygiene

The accessible shower area is a combination of the following: F4LT-Med thermostatic wall-mounted mixer, hand shower and MED-CARE angled grab rail with integrated hand shower holder and folding shower seat in basalt grey.

**In hospitals and care facilities, hygiene, safety and ergonomics are essential. The products of KWC Professional specially designed for the healthcare sector fulfil these requirements in terms of functionality and choice of materials. Now the healthcare product range is being supplemented with new barrier-free MEDCARE fittings.**

The support and grab rails in basalt grey impress with their pleasant feel and easy-to-grip ergonomic diameter of 32 mm. In addition to grab rails in various lengths, the range also includes a 90° angled grab rail and hinged WC grab rail. On the angled grab rail with hand shower holder and on the hinged WC grab rail with flush button, the functional components in white give users visual orientation in line with the proven two-senses principle.

This contrasting design is further reflected on the grab handles with integrated colour stripe on MED-CARE washbasins and the basalt grey coating on the lever end of the F4LT-Med pillar and wall-mounted mixers for patient and therapy baths.

Professional

An elbow-operated dispenser system for liquid soaps and disinfectants completes the MEDCARE range of accessories for various washing stations in the healthcare sector.

The range includes MEDCARE dispensers with a short stainless steel lever for patient baths and a long arm lever for physician and operating theatre sanitary facilities or unclean work areas. The basalt grey colouring of the spout harmonises with the other MEDCARE fittings and colour markings in the healthcare product range of KWC Professional.

Hygiene is supported by the quick and easy replacement of the disposable pumps in the KWC Professional range of accessories and by the robust and dishwasher-safe (up to 60 °C) housing in stainless steel. An optionally available drip tray completes the overall hygiene concept. The disposable pumps reliably dispense 1.5 ml per stroke. A fully recyclable plastic pouch protects the pump from contamination and acts as a glove when the pump is inserted. Two tabs on the side ensure that the pump is rendered unusable when the bottle is replaced. For both lever variants, the dispensers are available for 500 and 1,000 ml Euro bottles. The Euro bottles with disinfectant or liquid soap are not included in the manufacturer's scope of delivery.

#### **KWC Professional**

**KWC Professional is a specialised system and solution provider for sanitary facility equipment and intelligent water management systems for the commercial, public and semi-public sectors.
